

IMPORTANT NOTICE ABOUT HEARTWORM PREVENTION AND TREATMENT

Blackberry Veterinary Center is recommending year-round Heartworm prevention. The drug for treating heartworm positive dogs, Immiticide, is no longer being produced. Therefore, acquiring the drug is nearly impossible. We want to make certain our valued pets are protected from the insidious disease, heartworm. We carry the preventive, Tri-Heart, so please stop by and pick up more when you are finished with the prescription you received for this season. If you need any further information, please call us at **651-552-9101**.

Thank you!
